

Project Rubric

Response quality (65%)

Problem statement (20%): The problem statement must be representative of the original data and free from errors.

Clarity (15%): The response must be easy to understand and clearly expressed.

ML Techniques (15%): The response must discuss the techniques used to solve the problem statement previously defined

Teamwork (15%): The response must reflect a collaborative team effort within the group

Storytelling (20%)

How well the response is connected to the original data.

How the narrative and whole response connects together.

The presentation contains sufficient depth but is also concise.

How the response flows from one point to the next.

Presentation (15%)

The use of appropriate visuals.

How well-formatted the response is.

Spelling and grammar.

Insights based on the data using your own judgment and interpretation.

* each group presentation will be peer graded by the students, professor and the TA using a mentimeter form for each group for most but not all of the categories above.
